Horizontal axis: Time (cycles) to generate a ciphertext given a public key \( (\text{crypto\_kem\_enc}) \).

Vertical axis: Space (bytes) for a ciphertext \( (\text{crypto\_kem\__CIPHERTEXTBYTES}) \).

"I" means that the SUPERCOP database does not list IND-CCA2 security as a goal for this primitive.

The diagram illustrates the relationship between various cryptographic primitives, with nodes representing different algorithms and edges showing correlations or dependencies.
