The image contains a graph with data points representing various cryptographic algorithms. The horizontal axis represents time (cycles) to generate a public key, while the vertical axis represents space (bytes) for a public key. The data points are labeled with different cryptographic methods, such as 'crypto_encrypt', 'keypair', and others, along with their respective time and space measurements. The SUPERCOP database does not list constant time as a goal for this implementation, denoted by a symbol in the data points.
