Horizontal axis: Time (cycles) to generate a public key (crypto_sign_keypair).
Vertical axis: Space (bytes) for a public key (crypto_sign_PUBLICKEYBYTES).

This diagram shows the trade-offs between time and space for various cryptographic algorithms. The SUPERCOP database does not list constant time as a goal for this implementation. The algorithms are color-coded and represented as nodes in a graph, with edges indicating performance relationships. The specific details of each algorithm and their performance characteristics can be found at the referenced URL.
